

# PREMIUM FUSING COMPONENTS FOR USE IN

Canon, HP, Konica Minolta,  
Ricoh, Toshiba and Xerox

Fusing is the process of melting the toner particles and bonding them permanently on the paper with the aid of fusing films and rollers and finalizes in Laserprinters and Copiers/MFPs the transferring and imprinting of text and images on the paper. As energy consumption of printing devices has been reduced mainly by reducing the fusing temperature while printing speed has been increased the fusing-process has become more critical and requires high quality products.

To support our customers with a wide range of Fusing Components such as Fusing-Films, -Belts, -Rollers, -Gears and -Oil in OEM equivalent quality we have therefore released a line of components that match perfectly with the OEM toner and our Premium Compatible Toner.

All our Fusing Components are engineered and manufactured in Japan under stringent quality control processes that guarantee a very high and stable quality from batch to batch and shipment to shipment to which you and your customers can rely on.
